By Dr. Victor Jean Ouellette, DC, MS

Prioritization comes after **Measurements**, **Assessments** and **Identification**, and will also be about what is pertinent to you, the Participant, in the **WellnessRISKManagement** program. Health care professionals do this automatically based on their training and experience. We do it too.

In **WellnessRISKManagement** we want to **Prioritize** the results that are **most important** to your Wellness **at this present time**. This will also be a clinical decision built into the computer algorithm by Dr. Ouellette based on his years of experience in the musculoskeletal pain relief and Wellness Management fields. What does the science say? How should we identify the important scores? How should be deliver the data to the person measured?

Prioritization is made easy because the one page **Progress Chart** identifies the priorities in **RED** as in a **Red Flag**. That means these come first. This is based on how close, or far, from 100% you got in the measurement. There are also Yellow Flag scores which come after the Red Flagged items have been completed in the **Action Plan**. Your 35 page **Report of Findings** will explain all 38 scores about you and what the recommendations are for you based on your scores.

[Back to IDENTIFICATION](#)

[Next will come MOTIVATION.](#)
